

Packing Guideline

☎ 0120 683 683
www.sf-international.com

A. The importance of proper packaging (International transportation)

International shipments are handled and transited through many locations from the origin to the destination; improper and unprotected packaging will put the safety of the shipment at risk.

Packaging of international shipments is arranged by the customer. In order to make sure your shipments will be delivered on time and in good condition, let's learn the quick tips to protect your shipment.

B. Packaging service

Packaging of international shipments is arranged by the customer. (Please refer to the following column D. Packaging methods.)

SF International also offers professional packaging service for improperly packed shipments or by request. For service charge of packaging service, please contact our Customer Service at 0120 683 683.

C. Composition of packaging

1. Outer Packing: The external packing material protects the shipment from external damage during transportation.

Example: Envelope, plastic bag / flyer, double-walled carton box, wooden box etc.

Did you know?

Single-walled Carton Box	Double-walled Carton Box
Usually used in domestic transportation	Usually used in international transportation
	

2. Inner Packing: The material used for protecting the content from being damaged by crash or vibration.

Example: EPE sheet, form box

3. Cushioning: Material used for filling up the space between the product and box to avoid the content from moving inside the box.

Example: Bubble wrap, loose fill peanuts (EPE, EPS)

Did you know?

Recommended thickness of buffering material:

Weight of consignment	Thickness of buffer
0 – 3 kg	2 cm
3 – 5 kg	3 cm
5 - 10 kg	5 cm
10 - 15 kg	6 cm
15 kg +	8 cm

D. Packaging methods for different shipments

1. Does the shipment exceed this dimension?
(l) 70 x (w) 40 x
(h) 32cm

Packing for oversize product:

Outer packing: Wooden box or double-walled carton box

Inner packing: EPE sheet, corner protector, form box

Cushioning: Bubble wrap, loose fill peanuts (EPE, EPS)

1. Box-in-box packing is preferred in international transportation as it provides stronger protection than its original packing for the product and helps to prevent from damages during transition.

2. Sufficient cushioning materials shall be used inside the box to prevent the movement of product and fully wrap the inner box with bubble wrap. Place the wrapped box into the external packing box and fill void space with sufficient bubble wraps.

3. Different packing method shall be used for various products, please refer to packing advice #2 - 5.

2. Is there any glass bottle with liquid inside?

Packing for glass bottles:

Outer packing: Rigid box, e.g. double-walled carton box

Inner packing: Corner protector, cardboards

Cushioning: EPE

1. Use cardboards or EPE sheet (thicker than 1cm) to separate the bottles.
2. Place the corner protector onto the top and bottom of the outer retail package of bottle.
3. Stuff the space with cushioning material between the cardboards and the external packaging.

3. Are there any products/ part of product made of glass, ceramic, LED?

Packing for fragile items or valuable items

Outer packing: Double walled carton box or container with same strength

Inner packing: EPE sheet, cardboards

Cushioning: EPE sheet, bubble wrap, loose fill peanuts (EPE, EPS)

1. Wrap the contents separately with EPE sheet or bubble wrap. Then use cardboards or EPE sheet (thicker than 1cm) to separate the contents.
Used cardboards to protect the LED monitor before wrapping it with EPE sheet or bubble wrap.
2. Put the product in the center of the box to prevent it from touching the outer packing. Then fill up the space with sufficient cushioning material to avoid movement.

4. Is there just a few documents or clothes?

Simple packing

Outer packing: Envelope, Plastic bag/ flyer.

Inner packing: no special requirements

Cushioning: no special requirements

1. If it is a document, please put into the envelope to prevent it from being folded.
2. If it is an apparel or wet tissue, please put into the plastic bag / flyer.

5. Others

Packaging for general goods

Outer packing: Double-walled carton box or containers with same strength

Inner packing: EPE sheet, cardboards

Cushioning: Bubble wrap, loose fill peanuts (EPE, EPS)

1. Pack the product separately with EPE sheet or bubble wrap. Then use cardboards or EPE sheet (thicker than 1cm) to separate the items from collisions.
2. Put the product in the center of the box to prevent it from touching the outer packing. Then fill up the space with sufficient cushioning material to avoid movement.
